

Tammy Summers

Ridgely, TN

Technology is critical to a child's education if that child is to be prepared for the future. I teach in the poorest district in TN. Without help our children will not have access to any technology. My church has bought ipads for the school but without broadband speed and width, the technology is just a gadget. In fourth and fifth grade it is critical that students learn to research a subject and then apply and share findings. This cannot be done with one computer and one ipad. We need the help desperately.
